ON WHEN SUPPLY AIR SOURCE (VAV) IS PROVIDED ON

1. Provide digital interface to the control system for diagnostic, point information. Required points to be mapped include: Point #, Master Alarm, Volumetric Feed, Shaft Position, Hoof Horn Point etc.
2. Allow the user to select the desired point from the menu and be able to subscribe to the BUS for that particular General Event and Topic
3. Allow the user to change the number of points displayed on the screen. Provide Buttons located as shown on the floor plans. Tap the button for each open lat (not just a particular zone in an open lat) will go for emergency purge mode when any bulb in that lat is present
4. Provide a single controller for each Flow / Matching Zone. Broadcasted flow supports between separate controllers in each Supply or Exhaust
5. Provide a single graphic for each zone showing data that depicts all equipment and devices in the zone. Show all values and supports as indicated in the logic diagram below. Provide links to the full time hood controllers from the matching zone graphic, as applicable.
